Painters, three men

Coddy men, six men

Welders, four men

OTK - seven men

S E C R E T /US OFFICIALS ONLY/-

S E C R E T/US OFFICIALS ONLY/[REDACTED]

50X1-HUM

Battalion total ~ 317 men

5. A brief footnote to the Table of Organization of the motorized units of the Soviet Army:

Motorized troops in the Soviet Army, in their present form, are one of the newest subdivisions of the armed forces of the Soviet Union. They arose, were organized and reorganized during the last war [World War II] on the basis of war-time experience.

The war experience showed the importance of motorized transport in guaranteeing combat supplies for the army, in the preparation of the so-called "shock" maneuver operations. In the course of World War II, about 400 thousand motor vehicles of domestic and, predominantly, [ ] production ( ) were put directly at the disposal of the army. Motorized transport played an important role in the success of such large-scale operations as the summer offensive of 1944, the Warsaw campaign,

[ ] the Oder-Niessse forcing operation [ ]  
By 1945, 100 motorized regiments had been formed and were active on various sectors [ ]

[ ] 60 thousand motor vehicles took part.

The information concerning the table of organization of the motorized transport regiment, the mobile vehicle repairs plant (ARZ) and the special Army motor vehicles repairs battalion (GRVBA) was gathered from statements of men serving in these units (in the staff personnel) and deserves full credence. [ ] 20 motorized regiments and battalions, with the table of organization noted in the "data" above, were concentrated in eastern Germany after World War II.
